

IUTAM Symposium on Multi-Functional
Material Structures and Systems

IUTAM BOOKSERIES

Volume 19

Series Editors

G.M.L. Gladwell, *University of Waterloo, Waterloo, Ontario, Canada*
R. Moreau, *INPG, Grenoble, France*

Editorial Board

J. Engelbrecht, *Institute of Cybernetics, Tallinn, Estonia*
L.B. Freund, *Brown University, Providence, USA*
A. Kluwick, *Technische Universität, Vienna, Austria*
H.K. Moffatt, *University of Cambridge, Cambridge, UK*
N. Olhoff, *Aalborg University, Aalborg, Denmark*
K. Tsutomu, *IIDS, Tokyo, Japan*
D. van Campen, *Technical University Eindhoven, Eindhoven,
The Netherlands*
Z. Zheng, *Chinese Academy of Sciences, Beijing, China*

Aims and Scope of the Series

The IUTAM Bookseries publishes the proceedings of IUTAM symposia under the auspices of the IUTAM Board.

Preface

For centuries it has been the desire of human beings to find better and better materials to achieve a variety of benefits for the mankind. This has been in vogue from the stone-age. The recent revolution discovering Smart Materials and Functionally Graded Materials is one of those attempts. These materials are inherently multi functional and they opened up possibilities which could not be imagined in the past. Materials can take a particular type of energy stimulus as input and generate an output belonging to a different type of energy. Typical example has been materials on which a mechanical force can produce electrical output. We are in twentyfirst century where in materials Research will totally concentrate on these new concepts and exploit them for variety of applications. Structural Health Monitoring leading to safety of operations is the primary application the aerospace, mechanical, nuclear and civil engineers will be expecting from this research. The Micro- and Nano-scale sensors and actuators form the basis for this technology and Departments of Science and Technology in all the countries are investing heavily on this highly potential field.

In India, the scientific group in this area is active for the past decade. They formed in 1999 a professional society named as Institute of Smart Structures & Systems (ISSS) which has been holding National and International seminars and also helping the government departments to fund research and development of relevance to this novel materials and structures. National Program on Smart Materials (NPSM) and the second phase program NPMASS are the consequences of these efforts. The current symposium is part of this effort and the Editors of this publication are also scientists involved in these developments.

This symposium covered novel theories, mathematical models, analyses, manufacturing methods and application of computational and experimental methods. This publication is thematically divided into seven sections with a total of 35 papers authored by International Scientific Community. The coverage is quite comprehensive and it is heartening that half of these papers are from R&D in Indian organizations. We trust this volume will provide to researchers and applied technologists on the potential fruitful directions.

The Editors express their sincere thanks to International Union of Theoretical and Applied Mechanics (IUTAM) for sponsoring this symposium on “Multi-Functional Materials Structures & Systems” (IUTAM-MMSS08) at the Indian Institute of

Science (IISc), Bengaluru during 2008. The application was processed through Indian National Science Academy (INSA) and Prof. N.K. Gupta, one of the Vice-Presidents of INSA encouraged us to bid for it. Thanks to INSA and Prof. Gupta. The symposium was held between 10–12 December, 2008 at the Satish Dhawan Auditorium, IISc. Eightyfive delegates attended the symposium (with 22 of them coming from outside India) and the presentations brought out the core expertise available around the world in this newly emerging field. This book is the proceedings of this symposium. The papers were reviewed by International experts in this field and were revised before accepting for publication. Special thanks to all the reviewers who spent considerable amount of time on the papers in spite of their busy schedule.

From the time the symposium was approved by IUTAM, Prof. D.H. van Campen, Secretary General and Prof. J. Engelbrecht, Treasurer have been in constant touch with us and we were sending updates to them continuously. They were always prompt in replying to our enquiries. IUTAM provided funds to enable the organizers to support some of the participants towards Registration fee and accommodation and transport at Bengaluru. There was a change in Office bearers of IUTAM at the end of the year 2008. Prof. Frederic Dias and Prof. Niels Olhoff, who are the Secretary General and Treasurer of the new committee, helped us to finalize the accounts and closure report to IUTAM. Thanks to all Office Bearers of IUTAM.

We have also received generous financial support from Aeronautics R&D Board (ARDB), Government of India; Institute of Smart Structures & Systems (ISSS) and the Indian Institute of Science. We would like to express thanks to all of them.

The Assigned Scientific Committee consisted of experts in the area from around the world. Prof. J. Dual from Switzerland was the IUTAM representative. Many of the Committee members presented papers at the symposium. Their acceptance to be on the committee has been a great inspiration and we thank them all for their help and suggestions from time to time. The International Steering Committee chaired by Dr. V.K. Aatre, one of the Editors of this volume, was deeply supportive for the conduct of the symposium. One of the members from outside India, Dr. F.G. Buchholz of the University of Paderborn, Germany attended the symposium and chaired two sessions.

Prof. B.N. Raghunandan, Chairman, Department of Aerospace Engineering and Prof. P.J. Paul, Convener, Joint Advanced Technology Program at IISc and some of our senior colleagues including Profs. C.R.L. Murthy, Ranjan Ganguli, Kartik Venkataraman extended their full support for the symposium and thanks are due to all of them. Research and Masters' students helped us in many ways and thanks to all of them for their help. Mr. Shivanand Bhavikatti helped us in organizing the manuscript of the proceedings and this is acknowledged with thanks.

Contents

Section I New Materials A: Functionally Graded Materials & Shape Memory Alloys

Functionally Graded Shells with Distributed Piezoelectric Sensors and Actuators for Active Vibration Control	3
S. Narayanan and V. Balamurugan	
A Numerical Investigation of the Dynamic Behaviour of Functionally Graded Foams	15
Stephen Kiernan, Liang Cui, and Michael D. Gilchrist	
Nonlinear Stability of Functionally Graded Plates Subjected to Aero-thermo-mechanical Loads	25
M. Ganapathi, T. Prakash, and M.K. Singha	
A Generalized Three Species Model for Shape Memory Alloys	35
Ashish Khandelwal and Vidyashankar R. Buravalla	
Use of SMA Constitutive Model in Finite Element Analysis of Wire-Based Actuators	45
Prakash D. Mangalgiri and Amol G. Thakare	
Time Dependent Deformations in Concrete: A Multi-scale Approach	55
Ananth Ramaswamy and Harinadha Reddy	
Higher Order Theories of Functionally Graded Beams and Plates	65
Tarun Kant, S.M. Shiyekar, and C. Venkata Subbaiah	

Section II New Materials B: Nano Materials and Composites

A Strain Sensor from a Polymer/Carbon Nanotube Nanocomposite	77
Ning Hu, Yoshifumi Karube, and Hisao Fukunaga	
A Hysteresis Compensator Based on a Modified Dynamic Preisach Model for Conductive Polymer Nanocomposites	87
Mohammed Rabius Sunny and Rakesh K. Kapania	
Multi-Axial Behavior of Ferroelectrics with Two Types of Micro–Macro Mechanical Models	95
K. Jayabal, A. Arockiarajan, A. Menzel, and S.M. Sivakumar	
Active Single Walled Carbon Nanotube–Polymer Composites	103
Sujay Deshmukh and Zoubeida Ounaies	
Modeling of Fibre Formation and Oxygen Permeability in Micro-fibrillar Polymer-Polymer Composites	111
D. Bhattacharyya and R.J. Shields	

Section III Multifunctional Material Systems

Multiscale Computational Analysis of Biomechanical Systems	123
V.U. Unnikrishnan, G.U. Unnikrishnan, and J.N. Reddy	
Effect of Magnetic-Field on Stress–Strain Behavior of Magneto-Sensitive Elastomers	133
Prashant Kumar Srivastava and Kartik Venkatraman	
Effects of Functionalization on the Morphology, Cure Kinetics and Mechanical Behavior of Thermosetting Polymers	143
Mahesh V. Hosur, Merlin Theodore, and Shaik Jeelani	
A Study on Polarization-Electric Field Nonlinearity in Smart Composite Structures	153
V.L. Sateesh, C.S. Upadhyay, and C. Venkatesan	
Multifunctional Components in Sodium Cooled Fast Reactor: Design and Development	163
Baldev Raj and P. Chellapandi	

Section IV Smart Sensors, Structural Health Monitoring

From Structural Mechanics to Inspection Processes: Getting Structural Health Monitoring into Application for Riveted Metallic Structures	177
---	-----

C. Boller and M.R. Mofakhami

Shaped Modal Sensors for Uncertain Dynamical Systems	187
---	-----

Michael I. Friswell and Sondipon Adhikari

Sensor Failure Detection Using Interaction Matrix Formulation	199
--	-----

Zhiling Li, Satish Nagarajaiah, and B.H. Koh

Resonant MEMS Sensors	211
------------------------------------	-----

Rudra Pratap

Section V Applications

Compressive Behavior of Fibre Reinforced Honeycomb Cores	223
---	-----

S. Rao, S. Banerjee, K. Jayaraman, and D. Bhattacharyya

Strain-Space Solution for the Elasto-plastic Analysis of Adhesively Bonded Single Lap Joint	233
--	-----

B.M. Dawari and P.C. Pandey

Design and Development of a Smart Composite T-Tail for Transport Aircraft	241
--	-----

Samikkannu Raja

Manufacturing of Multi-functional Composites	251
---	-----

Prasad Potluri and Robert J. Young

Section VI Computational Methods- I

Iso-Spectral Rotating and Non-Rotating Beams	261
---	-----

Ananth Kumar and Ranjan Ganguli

Innovative Energy Absorbing Composite Tubes Incorporating Extension-Torsion Coupling, Stitch Ripping, and Foam Crushing	269
--	-----

Chandrashekhar Tiwari, Edward C. Smith, and Charles E. Bakis

A Pseudo-dynamical Systems Approach to Inverse Problems	279
--	-----

B. Banerjee and D. Roy

Force Reconstruction for Wave Based Damage Detection	289
Agam Sharan and Mira Mitra	
On Numerical Integration of Discontinuous Approximations in Partition of Unity Finite Elements	297
Sundararajan Natarajan, Stéphane P.A. Bordas, and D. Roy Mahapatra	
Section VII Computational Methods II	
Approximate Evaluations of the Modal Effective Electromechanical Coupling Coefficient	307
Ayech Benjeddou	
Distributed Point Source Model for Wave Propagation Through Multi-phase Systems	317
Prashant Bhise, Abhijit Mukherjee, Sandeep Sharma, and Raghu Ram	
Intrinsic Localized Modes in Micro-scale Oscillator Arrays Subjected to Deterministic Excitation and White Noise	325
Subramanian Ramakrishnan and Balakumar Balachandran	
A Theoretical and Computational Framework for Modeling Diffusion-Driven Boundary Motion Without Remeshing	335
Kaushik Mysore and Ganesh Subbarayan	
Multiscale Simulation of Metal/Ceramic Interface Fracture	343
Amir Siddiq and Siegfried Schmauder
