DEDICATION

To my father, mother and brothers for their prayers and support;

To my husband, and children: Takwa, Tasnim; and Mohammed

and to all my family and friends

ACKNOWLEDGMENTS

In the name of Allah, the Beneficent, the Merciful

All praise is to God. I am extremely grateful for all those who have provided me with their help, encouragement, and assistance in many different ways in order to complete my thesis. I would like to begin with Dr. Todd Hartle; I gratefully acknowledge his help and endless support. He was a supervisor in the proposal stage and a friend during my PhD journey. Without his encouragement and inspiration, this thesis would not have emerged and been completed. Thank you very much for your feedback, suggestions, inspiration, and providing a guiding path through my PhD journey. Professor Marie Kavanagh, thank you for giving me the opportunity to write on this topic. Thank you for your constructive feedback, help, and support through all the years of this study. I would like also to thank my associate supervisor, Dr. Melissa Johnson Morgan, for her guidance and assistance related to research methodology and her consistent open-door approach during the formulation of my thesis. My thanks also go to Liz Watson for all her material and moral support during my PhD journey.

My thanks also go to those who provided me with data or assisted me in data collection, including all Libyan accounting students at Libyan business degree institution. Also, I am indebted to Dr. Asma Taleb, Dr. Mohammed Matoak and Dr. Keath Elnowre. Thank you for your support and help in data collection.

I am also very grateful to all those people who helped me and provided me with their constructive feedback, ideas and support: Prof. Shulman, thank you for your time and

giving me permission to use the Learning Empowerment Scale 'survey'. It is a great honour to have you respond to my inquiries.

Finally, I would like also to thank all my lecturers and friends at the University of Southern Queensland (USQ). My office-mate Sophia Imran, for her friendship and for provision of constructive feedback on my English language use and my thesis; Chris O'Reilly, for her help, support, and feedback on writing my PhD. Thanks also go to Kellie grant for her friendship and assistance related to my English language development and usage. Special thanks to Dr. Lucas Van Der Laan for his help and endless support during my proposal journey.

All those I have mentioned above, your assistance and support are highly valued. My thanks also extend to those not mentioned above who have, in many unique ways, been of great support and assistance.

ABSTRACT

The purpose of this exploratory study is to compare a cooperative learning environment with a traditional educational environment within Libyan business degree institution and how this affects students' perceptions of empowerment and development of professional accounting competencies in a first year accounting course (Accounting Principles I). The research also investigates the relationship of empowerment with the development of professional accounting competencies and classroom instruction. This study involved quantitative and qualitative data from a survey of 288 students who were studying in their first year in Accounting Principles I; and pre and post written exams, and reflections were conducted. Quantitative data were analysed using reliability tests, factor analysis, t-tests and correlations. Qualitative data were analysed by hand coding. The results indicate that students who attended cooperative learning classes are more empowered than students who attended traditional classes. In addition, the results reveal that students' perceptions of empowerment and development of the professional accounting competencies were influenced by classroom instruction methods.
