**ORGANISATIONAL COGNISANCE:  
INTRODUCING A COGNITIVE DIMENSION TO THE CONCEPT OF  
ORGANISATIONAL ALIGNMENT**

A Dissertation submitted by

Senthurini Jeyaraj

Master of Social Sciences

For the award of

Doctor of Philosophy

2011

## **Certification of Dissertation**

I hereby declare that this submission is my own work and that, to the best of my knowledge and belief, it contains no material previously published or written by another person nor material which to a substantial extent has been accepted for the award of any other degree or diploma of a university or other institute of higher learning, except where due acknowledgement is made in the text.

I also declare that the intellectual content of this thesis is the product of my own work, even though I may have received assistance from others on style, presentation and language expression.

Date \_\_\_\_\_

## **Acknowledgements**

After considerable highs and lows experienced along the way, I have emerged intact, having newly discovered myself along the process. I appreciate and acknowledge this life-changing and meaningful experience and would like to take this opportunity to thank a number of individuals who helped me complete the journey.

First – my deepest gratitude and appreciation goes to Emeritus Professor Frank Crowther for being my mentor. It has been an honour. Frank, you have instilled in me the principles of good research practice. I deeply appreciate your patience with me during this process, and it is because of your tutelage that I have grown significantly.

To Associate Professor Dorothy Andrews – Dorothy, you have been a monumental figure during this process and I thank you also for being my mentor. I'm deeply touched by your commitment and consistent belief in me. You are an inspiration.

Special thanks go to the two IDEAS schools in Singapore that participated in the research study. In particular, I thank the staff for their commitment and willingness to share their personal experiences with me, which has been imperative to the research.

To my husband Nilesh, I sincerely thank you for being my pillar of strength. The completion of my dissertation is a great achievement and is a reflection of your deepest love, support and belief in my abilities. I am indebted to you for helping me see this journey through.

To my parents – I am deeply touched by of your support. Through this experience, I have come to realise the special bond I share with you both.

## **Abstract**

Contemporary understandings of the concept of organisational alignment in the management and education literature are predominantly strategic and structural in nature. While researchers have postulated cognitive aspects of the concept of organisational alignment, no definitive conception of a cognitive dimension has been proffered. Furthermore, while strategic and structural aspects of organisational alignment are considered important in research-based proposals, an understanding and agreement is yet to be fully established in the education literature regarding the significance of cognitive processes, for whole school capacity building.

Based partly on the researcher's interest in the nature of cognitive processes in organisations, and partly on a review of authoritative literature on the concepts of organisational alignment and capacity building, the aim of the doctoral study was twofold: first, to explore the core underlying processes of cognition that emerge within a school's professional learning community upon completing a whole school revitalisation process emphasising strategic and structural aspects of alignment; second, to explore the impact of emergent cognitive processes on capacity building for whole school improvement.

Data were collected through various methods such as in-depth individual interviews; focus groups; mindmapping; observations and focused conversations with teachers from two Singaporean schools that had undergone a three-year trial implementation of a whole school revitalisation program entitled Innovative Designs for Enhancing Achievement in Schools (IDEAS). This program emphasises strategic/structural alignment in its core processes and also recognises the importance of shared cognition. The research data were analysed using procedures underpinning the

constructivist approach to grounded theory methodology. The collection, analysis and interpretation of data occurred in four distinct stages that resulted in two conceptual frameworks emerging: (1) an explanatory framework of the emergence of organisational cognisance and (2) the conceptual model of the impact of organisational cognisance on enhanced school capacity.

The explanatory framework of the emergence of organisational cognisance comprises five elements: 'schema'; 'factors of influence'; 'factors of support'; 'cognitive change dynamics'; and the core concept of 'the emergence of organisational cognisance'. The framework details the developmental nature of the effect of whole school revitalisation on the emergence of organisational cognisance.

The insights gained into the construct of organisational cognisance were explored through further data analysis to help enhance current understandings of school capacity building. To this end, a conceptual model that details the impact of organisational cognisance on enhanced school capacity was constructed out of the second data analysis. The model captures an understanding of organisational cognisance as a vital source in developing aspects of personal capacity, interpersonal capacity and professional capacity for enhancing schoolwide capacity.

The significance of the research resides in two postulations: first, of a cognitive dimension to the concept of organisational alignment; second, of its importance for school capacity building.
