Lighthouse Delta 2013
24 - 29 November, KIAMA, Australia

Shining through the fog

The 9th Delta Conference of teaching and learning of undergraduate mathematics and statistics

Proceedings

Editors: Deborah King, Birgit Loch, Leanne Rylands
Proceedings of the 9th DELTA conference on the teaching and learning of undergraduate mathematics and statistics

Conference held on the 24-29 November 2013, in Kiama (New South Wales, Australia),
Conference Chair: Cristina Varsavsky
Editors: Deborah King, Birgit Loch, Leanne Rylands
Production Editor: Nancy Van Nieuwenhove

FOREWORD

The first of the Delta series of conferences on the teaching and learning of undergraduate mathematics and statistics was held in Brisbane, Australia, in 1997. A Delta conference has been held every second year since then. All are held in the southern hemisphere and so far they have been held in South Africa, New Zealand, Argentina and Australia.

*Lighthouse Delta* is the ninth conference in the Delta series, held from the 24th to the 29th of November 2013 at the Pavilion, in Kiama, a small coastal town with a population of approximately 13,000 located 120km from Sydney.

The conference theme, “Shining through the fog” encapsulates the challenges faced by those with responsibilities for building the mathematics and statistics capacity needed for the 21st century. Indeed, it is a challenge. In some countries, including Australia, secondary school students are turning away from mathematics in their final years, yet we must do our best to prepare them for a technological world in which science, technology, mathematics and engineering are ever more important.

How do we make our way through the fog created by the many possibilities for teaching and engagement? The variety of technologies available to us, the many types of assessment, what to do online and what not, the use of e-resources, the many different approaches to teaching; all these provide many possibilities and hence there are many important decisions for those of us teaching mathematics. The passion, enthusiasm and expertise of the many *Lighthouse Delta* presenters can only help to improve our knowledge, to assist us to make good decisions and to improve tertiary mathematics teaching in the southern hemisphere and beyond.

The presentations at *Lighthouse Delta* include those from the authors of the papers in these proceedings, those whose papers appear in the Special Delta Issue of the *International Journal of Mathematical Education in Science and Technology* and many who chose just to give an oral presentation or a poster presentation. The *Lighthouse Delta* presenters came from more than a dozen countries.

These proceedings contain papers presented at *Lighthouse Delta*. Each submission was double blind reviewed by a minimum of two reviewers.

One of the organising committee members is working on a permanent web presence for Delta and it is hoped to have the previous Delta proceedings available on this site as well as these proceedings.

We give our heartfelt thanks to the various committees who made *Lighthouse Delta* happen, to our administrative support, the reviewers and to Cristina Varsavsky, who oversaw and coordinated it all. We also thank the International Steering committee for keeping Delta going.

We hope that you find *Lighthouse Delta* enjoyable and stimulating, and that you also have some time to enjoy the lovely Kiama surroundings.

*Lighthouse Delta Proceedings Editorial Team*
Deborah King, Birgit Loch and Leanne Rylands,
Shining through the fog

The 9th Delta Conference on teaching and learning of undergraduate mathematics and statistics
24 - 29 November, KIAMA, Australia

CONTENTS

PAPERS [2-216]

[2-11] First year university students’ understanding of functions: Over a decade after the introduction of CAS in Australian high schools, what is new?
Caroline Bardini, Robyn Pierce and Jill Vincent

[12-29] Maximum problems without calculus: design, teaching and assessment using Maple
Bill Blyth

[30-39] Students’ mathematical preparation Part B: students’ perceptions
Tim Dalby, Clare Robinson, Shahab Abdulla, Linda Galligan, Anita Frederiks, Robyn Pigozzo and Andrew Wandel

[40-49] Students’ mathematical preparation Part A: lecturers’ perceptions
Linda Galligan, Andrew Wandel, Robyn Pigozzo, Anita Frederiks, Clare Robinson, Shahab Abdulla, Tim Dalby

Jenny Henderson and Sandra Britton

[59-69] Use and perceptions of worked example videos for first-year students studying mathematics in a primary education degree
Simon James, Jacqui Brown, Toni Gilbee and Chloe Rees

[69-80] WeBWorK CLASS: Fostering design experiment research on concept development
Gulden Karakok, Nicole Engelke and Aaron Wangberg

[81-90] Teaching first-year business statistics three ways
R. Nazim Khan

[91-101] Perceptions of feedback in mathematics – results from a preliminary investigation at three Australian universities
Deborah King, Birgit Loch, Leanne Rylands
[102-112] From innovation to implementation: Multi-institution pedagogical reform in undergraduate mathematics
Sandra L. Laursen

[113-123] StatsCasts: Supporting student learning of introductory statistics
Christine McDonald, Peter K. Dunn, Birgit Loch and Vida Weiss

[124-131] Introducing queuing theory through simulations
Soon Wan Mei and Ang Keng Cheng

[132-140] Audience insights: Feed forward in professional development
Judy Paterson and Tanya Evans

[141-149] Undergraduate mathematics outcomes: The mantis shrimp spectrum
Judy Paterson and Bill Barton

[150-159] Mathematics bridging courses and success in first year calculus
Leon Poladian and Jackie Nicholas

[160-171] Interactive teaching using tablet PCs: Designing effective questions
Daphne Robson and Dave Kennedy

[172-179] Mathematics and ocean swimming
L. J. Rylands

[180-189] Letters & numbers: A vehicle to illustrate mathematical & computing fundamentals
S. J. Sugden, P. A. Stocks

[190-198] A constructivist approach to mathematics laboratory classes
Raymond Summit and Tony Rickards

[199-208] Addressing dualism in mathematical abstraction: An argument for the role of Construal Level Theory in mathematics education
Stuart Torr and Tracy S. Craig

Cristina Varsavsky, Karen Hogeboom, Carmel Coady, Deborah King

ABSTRACTS [217-266]

[218] The role of modeling mathematics teaching in improving mathematical teaching skills for student teachers
Talal Saad Al-Harbi

[219] The mathematics of juggling
Peter Bier

[220] Is there a relationship between learning space and satisfaction with learning experience in a first year statistics tutorial class?
Ayse Aysin Bilgin, David Bulger, Greg Robertson

[221-222] The changing notion of a mathematics problem in the internet age
Marcelo C. Borba

[223] Changing assessment: Shifting the emphasis to learning and use, David Boud

[224] Curriculum design, assessment and technology in mathematics for biomedical sciences: A case study, Steven Carnie and Anthony Morphett
Roving mathematics assistance, *Carmel Coady, Lyn Armstrong, Harkirat Dhindsa, John Nicholls, Jim Pettigrew and Don Shearman*

Do highly mathematics-anxious students fear mathematics or the thought of attempting a mathematics question? *Anne D'Arcy-Warmington*

Summer school versus term-time for fundamental mathematics at the tertiary level, *David Easdown, George Papadopoulos and Collin Zheng*

An elementary statistical workshop course for postgraduate research students, *Ant Edwards and Chris Mellor*

Modified Japanese lesson study for post-secondary mathematics education, *Barbara Edwards and Gulden Karakok*

Practising engineers’ conceptions about how mathematics should be taught to engineering students, *Johann Engelbrecht, Christer Bergsten and Owe Kågesten*

How should we treat repeating students? *John Hannah and Alex James*

Attitudes of pre-service primary teachers to mathematics, *Dilshara Hill and Carolyn Kennett*

Assignment submission via video in a large first year calculus class, *David Holgate, Justin Munyakazi, Leila Adams and Duncan Smith*

The presence of mathematics anxiety in future primary school teachers and factors affecting abatement, *Simon James, Lynn Batten and Michelle Cyganowski*

Linear algebra for engineering: Using rectangular systems, *David J. Jeffrey and Robert M. Corless*

Factors influencing student decision on senior secondary school subjects *Michael Jennings*

Future state of the evolving classroom in mathematics, *Bathi Kasturiarachi*

Effectiveness of online lectures in a first year mathematics unit, *Carolyn Kennett and Dilshara Hill*

The role of first year coordinators of mathematics programs, *Deborah King*

Leading students to creatively develop mathematical models via leaky buckets, *Brynja Kohler and James Powell*

Dealing with engagement issues in engineering Mathematics, *Christine Mangelsdorf*

Aiding conceptualisation in first-year statistics with interactive applets, *Anthony Morphett*

Film: developing a new resource for teaching undergraduate biometry, *Miranda Mortlock*

The significance of designing a course in mathematics focusing on fundamental mathematical concepts, *Sho Niitsuma and Ryosuke Nagaoka*

Assessing students using multi-choice tests and exams: How to examine skills, processes and in-depth mathematical understanding, *Julia Novak and Tanya Evans*

Immersive technology in an undergraduate mathematics course, *Greg Oates, Louise Sheryn and Mike Thomas*
Using Moodle for assessments of large groups: Mathematics students’ experiences, Pragashni Padayachee

Calculus unlimited, John William Rice

Mathematics exams as a learning process to build skills, knowledge and confidence, Carolyn. E. Sandison and Carole. L. Birrell

Views of mathematics assessment in the UK, Adrian Simpson

Motivating students in an introductory matrix algebra course, Karsten Schmidt

Teaching foundations of finite group theory via programming, Ilya Shilin

An interactive online calculus text for the iPad (and other browsers), David Smith and Lawrence Moore

Study process for mathematics: Disjointed or embedded? Maritz Snyders and Sarie Snyders

Preliminaries for a first year course on modelling, Kerri Spooner

Mathematical knowledge of the lecturer and mathematical knowledge for lecturing at the undergraduate level: An attempt to distinguish between the two, Dhanya Surith

Differential equations and handheld CAS technology, Patrick Tobin and Vida Weiss

Development of a summated scale for measuring approaches to assessment practice of undergraduate mathematics lecturers, Sven Trenholm, Lara Alcock and Carol Robinson

Mathematics and statistics for life science students: Discussing the contribution of mathematics and statistics departments, Cristina Varsavsky and Kelly Matthews

Using a classroom response system to transform student engagement, Jeff Waldock

The statistical anxiety rating scale: A review and a new application, Lyndon Walker

Student confidence in mathematics – pre- and post-support, Lesley Wilkins

Practice to academy transitions, Leigh Wood, Merrilyn Goos, Michael Wilson, Ian Solomonides And Peter Dixon

A longitudinal study of students undertaking a mathematics major: Changes in attitudes, learning behaviours and achievement, Susan Worsley

On an “essential” difficulty in bridging the gap between school and university mathematics, Shigeto Yuito and Ryosuke Nagaoka

POSTERS [267-270]

Can instructors accurately describe their classroom practice? Assessing the impact of professional development on inquiry-based learning and teaching in undergraduate mathematics, Sandra Laursen and Charles Hayward

Teaching and learning differential equations with graphical, numerical and analytical approaches, Maria Madalena Dullius

'Who put the maths in chemistry?' Raising student awareness and self-efficacy in mathematical process skills in first-year chemistry, Arti Singh, Gwen Lawrie and Michael Jennings
