Commonwealth Climate Change Communication Conference (C5) --- ON-LINE! --- 24-26 November 2010

Thank you

Thank you for taking part at the Commonwealth Climate Change Communication Conference.

You can still see the [presentations](#) by logging in. The event is now closed and we look forward to welcoming you again in one of our future on-line climate conferences.

Rationale

Climate change is and will continue to be one of the central issues in the world's agenda. The 15th Conference of Parties (COP 15) of the UN Framework Convention on Climate Change held in Copenhagen in December 2009 has reiterated how much still needs to be done in order to tackle the various challenges climate change -and its various ramifications- pose to mankind.

Across the Commonwealth, the latest meeting of the Commonwealth Heads of State (CHOGM 2009) in Trinidad and the commitment expressed in the "Port of Spain Climate Change Consensus" to help Commonwealth States to face the challenges of climate change are some of the concrete signs that climate issues are taken very seriously by Commonwealth countries, which now actively search for ways to cope with the various challenges it poses.

Format

The online "Commonwealth Climate Change Communication Conference" offers [presentations](#) and a [forum](#) for information exchange and knowledge transfer among the relevant stakeholders, gathering researchers, government officials, educationalists, policy makers and further interested people, encouraging them to jointly discuss ways how to overcome existing barriers towards efforts in fostering climate change communication. The online nature of the event means that thousands of people from across the Commonwealth can access is, from home or from their offices and at their own pace. The technical computer and software requirements have been kept to a minimum, so as to ensure access even from areas with poor internet connections.

United Nations Decade of Education for Sustainable Development (DESD)

In December 2002, the United Nations General Assembly (UNGA) adopted resolution 57/254 to put in place a United Nations Decade of Education for Sustainable Development (DESD), spanning from 2005 to 2014, and designated

UNESCO to lead the Decade. During this decade, education for sustainable development will contribute to preparing citizens better prepared to face the challenges of the present and the future, and decision-makers who will act responsibly to create a viable world. ESD supports five fundamental types of learning to provide quality education and foster sustainable human development – learning to know, learning to be, learning to live together, learning to do and learning to transform oneself and society.
